

**I purchased the Tak-Tenna for 20 meters. Assembles according to the good instructions in about 1 hour. Tuned it at about 12 feet for 14.280.**

**The first CQ I heard was in Honduras. I answered back and after the second time He acknowledged me with a 5/9! Wow! This Tak20 really works good.**

**I have made many more contacts depending on band conditions.**

**I feel that it outperforms my inverted V and it is so much smaller and less obvious which is good in my neighborhood.**

**For a wire antenna, This thing is great. I also have to add that Steve was a great help, he even helped me over the phone.**

**If you are even thinking about buying one of these I would say buy it, you won't be disappointed.**
